Profile

Passionate full-stack developer with a strong design mindset, dedicated to work smart and be an honest leader. Multi-talented, I thrive in helping others, sharing knowledge, and bringing humor to light-hearted environments.

Professional Experience

MERN Stack Developer, Hyathi Technologies

Feb 2023 – Jun 2024

Project : PulseIR

Gorakhpur, India

- Created a multi-step form for companies to create customized investor portfolios, enhancing user engagement.
- Implemented live preview and image manipulation features within the form, reducing form completion time by 25%.
- Developed CRUD APIs for Company Profiling and Blogs, streamlining data management processes.

Project : Desofy

- Developed custom hooks for seamless post fetching and integration, significantly improving data retrieval speed.
- Resolved critical UI and functionality issues, leading to a 20% increase in positive user feedback.
- Integrated blockchain for secure transactions and user data storage, ensuring enhanced data security.

Project : Mahalo

- Designed the frontend to enable NFC tag scanning, ensuring a secure and reliable user flow.
- Integrated a payment gateway to facilitate seamless transactions, reducing transaction failures by 20%.
- Developed APIs to support payment processing and user-related functionalities, improving processing efficiency.

Project : SaveForFree

- Implemented functionalities allowing companies to customize the parent website for specific use cases, increasing platform adaptability.
- Utilized subdomains to offer users a tailored platform experience, leading to higher user retention.

Project : Digy4

- Prepared the complete logic for a nested tabular dashboard to display logs and related data in real-time, improving data visibility.
- Designed a multi-step form for creating and editing pipelines with real-time validations, reducing form errors by 35%.

Project : Vibehut

- Developed UI elements to support room search, room creation, and event management, increasing user activity.

- Integrated AI-driven features for event creation and automatic detail filling, improving event setup time by 30%.
- Built infrastructure for subscription-based access to features at both frontend and backend levels, contributing to subscription revenue growth.

Frontend Developer, Hashtag Developer

Apr 2022 – Jan 2023

Project : The Storio

Ahmedabad, India

- Developed the frontend architecture and designed reusable dynamic components.
- Enhanced user experience with an intuitive and functional UI.
- Improved SEO using Next.js Server Side Props.
- Integrated GraphQL API for fast and well structured data interaction

Project : TPMS

- Designed the entire layout for a web dashboard.
- Integrated OpenStreetMap with custom code for routes and geofencing.
